COMMERCIAL SYSTEMS, THOUGHTFULLY COORDINATED

Technology that supports the way your building operates.

Vihera Technologies delivers commercial technology solutions designed to bring connectivity, security, access, and control together in one coordinated plan.

CORE SOLUTIONS

Structured Cabling

Robust infrastructure built to support dependable performance and future growth.

Security & Access

Integrated access control, alarm, and surveillance planning for clearer oversight.

Automation & Control

Centralized interfaces that make connected building systems easier to manage.

Support & Servicing

Maintenance and remote-service options that help keep systems running reliably.

HOW WE WORK

A clear path from planning to ongoing support.

Each project benefits from a coordinated approach that considers operational needs, project timelines, and long-term system performance.

01

Strategic planning

Define objectives, functional requirements, and technology priorities.

02

Value engineering

Evaluate options for performance, scalability, and cost efficiency.

03

Implementation

Coordinate infrastructure and systems for a reliable, integrated result.

04

Handover & service

Support the transition with maintenance and remote-service options.

SERVICES

Enterprise-grade structured cabling

A high-performing commercial space needs a robust, future-ready cabling foundation. Our structured cabling approach supports dependable connectivity across the building.

Commercial-grade infrastructure

Cabling planned for durability, high-speed data transmission, and consistent performance throughout your commercial space.

A foundation for connected systems

Infrastructure that can support security, surveillance, intercom, access control, AV, and centralized control.

Built with growth in mind

Scalable planning that helps accommodate evolving technology and higher bandwidth needs.

SERVICES

Security, alarm & access control

Security is most effective when the systems work as one coordinated strategy. Integrated solutions can protect assets, regulate movement, and give teams clearer operational visibility.

Integrated system planning

Access control, alarm, and security systems considered together rather than as disconnected tools.

Simplified management

A cohesive system can help provide visibility, accountability, and streamlined daily operation.

Flexible for commercial environments

Scalable approaches suited to commercial, industrial, and multi-site applications.

SERVICES

Accessible entry & automatic door operators

Automatic door operator systems can improve accessibility, strengthen building flow, and integrate with broader access-control strategies.

Entry & common-area operators

Solutions for main entrances, common areas, and other high-traffic access points.

Accessible washroom operators

Operator systems that support accessible, code-conscious building access.

Activation & integration

Touchless, push-plate, wireless, card-access, and intercom integration options.

SERVICES

Surveillance, intercom & live monitoring

Modern surveillance is about actionable visibility, not simply recording footage. Integrated cameras, intercoms, and secure access can support a more informed response.

Clearer oversight

High-definition surveillance planning for indoor and outdoor commercial environments.

Connected systems

Surveillance can be coordinated with intercom and access-control platforms to support perimeter and internal oversight.

Flexible access & retention

Remote access and on-site or cloud-based storage approaches can be tailored to operational needs.

SERVICES

Centralized control, AV & ongoing service

Bringing connected systems into a more intuitive interface can reduce daily complexity. Maintenance and remote-service options help support reliable operation after handover.

Centralized control

Coordinate AV, lighting, access, security, and connected building systems from one interface.

Operational clarity

Monitor key functions, automate routines, and respond to changing conditions with greater ease.

After-care support

Maintenance, remote diagnostics, software updates, and system checks to help reduce downtime.

VIHERA TECHNOLOGIES

Designed for commercial environments that need technology to work harder.

We help builders, developers, and commercial teams plan connected systems with practical performance and long-term operation in mind.

ENVIRONMENTS WE SUPPORT

- Retail
- Hospitality
- Industrial
- Construction & development
- Fitness & recreation
- Multi-dwelling properties
- Public sector
